- Latest microprocessor technology makes the measuring circuitry absolutely stable and dependable for years of usage. The calibration is internally checked before each reading. We continuously up-date our species correction charts to allow measurements of new species and engineered products.
- Convenient to use. Meter turns itself on and off. When pins are pushed into the material, instantly the moisture percentage is displayed. No need to press on-off button. True one-hand operation.
- The lighted LED display is easy to read in dark areas. More important is, the LED display is almost undestructible, whereas LCD's displays sometimes brake when dropped. For that reason, we now give a life-time warranty for the red LED display.
- The green cap is the cover and a handy grip for easy probe insertion. The cap stays always with the meter and should not get lost.
- mini-Ligno E/D comes with 2 different settings

Recommended for mostly domestic wood species.
- Measuring range is 6-45%

Meter comes with 2 sets of interchangeable pins, battery, wrist strap, pouch, laminated species card, manual and info sheet about moisture problems.

Standard warranty is 2 years for meter and 1 year for accessories.
Battery and Pins are excluded.

Should you decide to offer our meters in your stores, we will give you a 5 year warranty on the mini-Lignos.
